

HEPATOMIC SYRUP

Product basic composition:

Each 100 mL contains:

DL-methionine	8 g
Choline Bitartrate	8 g
Silymarin	0.600 g

Indications:

For animals in training, in need of improvement of their appearance and behavior, convalescents, of any disease, anorexic, with acute or chronic liver disease, etc.

It has antioxidant, lipotropic and detoxifying factors. Some characteristics of its components: Methionine is an essential, lipotropic amino acid, which it is also a powerful antioxidant and a good source of sulfur for the body. Choline, essential for the liver and brain, precursor of acetylcholine molecule, is involved in many functions of the body such as the synthesis of components that are part of cell membranes as well as in the use of fats and their transport outside the liver, acts as a hepatic detoxifier. Silymarin is a powerful antioxidant from the thistle (*Silybium marianum*), absorbs free radicals that destroy healthy cells in the body.

Target species:

Canine and feline.

-

Route of administration:

Oral route. Shake well before use.

Dosage:

Canine: up to 15 kg of weight, 4 mL, between 15 kg and 30 kg, 8 mL: between 30 and 45 kg, 12 mL, more than 45 kg, 16 mL, 2 or 3 times a day, during 60 days, depending on the purpose of its administration.

Feline: up to 5 kg, 2 mL, over 5 kg, 4 mL, 3 times a day, during 60 days, depending on the purpose of its administration.
