

SHOOTER FORTE CANINE

Spot – on, canine
Veterinary use

Formula:

Permethrin.....45 g
Imidacloprid.....10 g
Fenoxycarb.....0.6 g
Excipients q.s.ad.....100 mL

Indications:

Against fleas, lice and ticks. With environmental effect, it decreases the fleas in the pet's environment.

Route of administration:

Spot on, topic use. Apply separating the hair, on the dorsal midline, behind the base of the neck (withers) in such a way that the product goes into direct contact with the skin. On larger dogs, apply on more than one spot along the dorsal midline. The product application is recommended every 30 days, which depend on the infestation, propitious environmental circumstances, bath frequency, etc. Consult the veterinary for a correct use of the product.

Precautions:

Do not administer to puppies younger than 2 months old. It is not recommended to bathe the animal 48 hours before or after application. If product enters into contact with eyes or mouth membranes of the animals, rinse abundantly with water. Do not apply on areas where the skin has lesions or presents irritation.
